Solution

StarWind Virtual SAN (vSAN)

"We currently have a database and 4 hypervisors using StarWind. All requirements are fully satisfied."

Alonzo Rainero, CIO

Challenge

Before StarWind Virtual SAN (vSAN) deployment, Arbeit Software had no SAN, which meant they were unable to stand up any hypervisors.

This issue resulted a bottleneck in their operations, as they were unable to expand their infrastructure and utilize their resources fully.

After some research, company decided to implement StarWind vSAN. They chose this solution because of its budget-friendly nature and excellent support. The company didn't trial any other solutions and went straight to using StarWind vSAN.

Solution

StarWind vSAN provided a solution to the company's SAN-related problems. The addition of StarWind vSAN allowed Arbeit Software to add hypervisors and databases to their infrastructure. They were able to utilize all their resources fully and expand their IT infrastructure.

Now, Arbeit Software has a database and four hypervisors using StarWind vSAN. They have been able to fully satisfy all their infrastructure requirements.

The company's IT infrastructure works exceptionally well, and they are not experiencing any bottlenecks or slowdowns in their operations.
