Solution

StarWind Virtual SAN (vSAN)

"I'm very satisfied with StarWind. Better performance, much simpler to maintain. Better price to performance ratio."

Dan Reynolds,
Senior Systems Administrator

Challenge

Before StarWind Virtual SAN (vSAN) deployment, BLDD Architects had an EMC SAN infrastructure with VMware on top. Existing infrastructure entailed issues with poor performance, difficult maintenance, and high financial costs.

This option was not viable and could not satisfy the main company's requirement for ensuring the balanced and long-term development of its business processes.

Solution

BLDD Architects has chosen StarWind vSAN as it could be easily deployed on the existing company's hardware and could eliminate the issues required.

Having a wide range of functionality, StarWind vSAN is maintenance-friendly and creates high-performance IT infrastructure. And, what is more important, it ensures the top-flight price-performance ratio.

BLDD Architects is also satisfied with StarWind ProActive Premium Support. The response time and expertise make an experience with StarWind Support Team the best one BLDD Architects has ever had.
