

BTT Cloud optimizes its business operations by creating a hyperconverged IT infrastructure around StarWind Virtual SAN (VSAN)

About the Company

BTT Cloud is a Lithuanian IT Managed Service Provider (MSP) that implements complex solutions for IT infrastructures throughout the country and the rest of Europe.

Industry

IT & Services

Location

EMEA (Lithuania)

Solution

StarWind Virtual SAN (VSAN)

"StarWind is the best price/performance solution. We are planning to use StarWind everywhere possible."

Technical Account Manager

Challenge

Before deploying StarWind Virtual SAN (VSAN), BTT Cloud relied on hardware storage solutions. Its infrastructure consisted of separate compute and storage components, managed through different solutions. Scaling was challenging, and the existing setup required dedicated management for each component.

As the company used Hyper-V as its hypervisor, finding a solution that seamlessly integrated with its environment posed a significant challenge.

Solution

By implementing StarWind VSAN, BTT Cloud transitioned from standalone servers to a hyperconverged infrastructure, reducing the number of servers needed while enhancing scalability and management efficiency.

StarWind's seamless integration with Hyper-V ensured a smooth transition and simplified management. With StarWind in place, BTT Cloud experienced improved scalability, streamlined management, and reduced hardware overhead. BTT Cloud plans to expand StarWind's usage across its infrastructure, aiming to leverage its benefits wherever possible.
