Solution

StarWind HCI Appliance (HCA)

"StarWind offered a cost-effective and reliable solution to the problem of data storage in a virtualized environment. The main benefit from my perspective as a sysadmin has been the outstanding support I receive from the StarWind team."

System Administrator

Challenge

Before implementing StarWind HCI Appliance (HCA), Consult Hyperion relied on numerous individual physical servers, which resulted in complexity and management overhead. The use of Hyper-V as the hypervisor brought some virtualization benefits, but the company needed a reliable storage solution for virtualized environments. After researching and considering recommendations from peers on platforms like Spiceworks, the company chose StarWind HCI Appliance.

Solution

StarWind HCI Appliance offered a streamlined approach to virtualization, providing a reliable and cost-effective storage solution for the company's virtual environment. The consolidation of storage and compute resources optimized the environment, making it more agile and easier to manage. While the company anticipates potential changes due to its increasing migration to cloud services, the existing infrastructure is performing exceptionally well.

The transition to StarWind HCI Appliance brought about enhanced reliability and flexibility, critical for a growing business like Consult Hyperion. The support provided by StarWind Support Team has solidified the company's confidence in the solution.
