Solution

StarWind Virtual SAN (vSAN)

"StarWind provided reliable and affordable storage. Whenever we need highly available storage we will certainly consider the use of StarWind."

Jan Demuynck,
Company Representative

Challenge

Before the deployment of StarWind Virtual SAN (vSAN), the IT infrastructure of Jaco IT-Solutions relied on single-server solutions without any redundancy. This setup posed a significant challenge as it lacked high availability, leaving the company vulnerable to potential downtime and data loss.

The absence of a reliable redundant system prevented the company from providing its clients with the level of service they deserved.

Solution

By integrating StarWind vSAN, Jaco IT-Solutions was able to establish a reliable and affordable storage environment. This solution significantly enhanced the availability of its systems, ensuring that the client's data and applications remained accessible even in the event of hardware failures or other disruptions.

Looking ahead, the company intends to incorporate StarWind's solution whenever it requires highly available storage resources. The effectiveness of StarWind vSAN in addressing the company's immediate challenges has solidified its confidence in its capabilities.
