## Problem

The company was looking for virtual shared storage to get simplicity in storage management.

## Solution

With StarWind vSAN, the company replaced its physical storage and renovated its IT infrastructure, achieving simplicity in storage monitoring and management.

## Problem

Before StarWind Virtual SAN (vSAN) deployment, **News Corp Australia** had physical storage with a VMware ESXi hypervisor on top. The company needed a virtual shared storage solution to achieve simplicity in storage management.

## Solution

News Corp Australia has chosen **StarWind vSAN** as it allowed to build an IT infrastructure that currently satisfies all the company's requirements. Being the best product in the virtualization market in regard to the price-performance ratio, StarWind vSAN made direct storage management possible for the company. Existing virtualization admins can monitor and operate everything via the built-in StarWind Management Console. Besides, News Corp Australia was very pleased with the help of StarWind Support Team.

StarWind vSAN is easier to manage and upgrade.
