Solution

StarWind HCI Appliance (HCA)

"With StarWind, we can now have full redundancy across our cluster. Also, we now have no downtime during maintenance. StarWind customer support is by far the best I've used for any product."

Danny Rackow,
Company Representative

Challenge

Before implementing StarWind HCI Appliance (HCA), Precise Imaging's IT infrastructure comprised standalone hosts running VMware. The main issue was the lack of high availability.

Precise Imaging was vulnerable to downtime and data loss, which could occur during maintenance or in the event of hardware failures. This issue needed an immediate and effective resolution.

Solution

StarWind HCI Appliance revamped Precise Imaging's infrastructure introducing a highly available virtual SAN environment, ensuring full redundancy across its cluster. This critical capability not only eliminated downtime during maintenance but also provided the assurance of data availability even in the face of hardware failures.

The implementation of StarWind HCI Appliance transformed Precise Imaging's infrastructure. The hosts were delivered with all the necessary components pre-installed, streamlining the setup process.

Through effective communication and support from StarWind Support Team, the company quickly got its environment up and running.
