Solution

StarWind Virtual SAN (vSAN)

"It is a good solution that had already made a name for itself."

Titus Chiu, Sr. Systems Engineer

Challenge

Before the deployment of StarWind Virtual SAN (vSAN), Quick Bridge Funding, LLC relied on a Dev/QA/Staging environment that required high availability (HA) and shared storage for its ESXi cluster. The existing hardware was available, but the absence of a suitable storage solution hindered its ability to ensure redundancy and scalability in its virtualized environment.

Quick Bridge Funding, LLC selected StarWind vSAN to address its infrastructure challenges. It was not only a better solution in terms of meeting its HA and shared storage requirements, but it also proved to be easier to implement.

Solution

The deployment of StarWind vSAN brought a transformation to Quick Bridge Funding, LLC's IT infrastructure. The solution provided easily scalable shared storage, allowing the company to leverage its existing hardware efficiently. This scalability ensured that its ESXi cluster had the redundancy and performance required for its Dev/QA/Staging environment.

Now Quick Bridge Funding, LLC has four hosts running in an HA mode, and the company finds the configuration and setup process to be straightforward. As it continues to expand its IT infrastructure and virtualization needs, it intends to explore the scalability of StarWind vSAN to meet its evolving requirements.
