Problem

The company required a minimalistic solution to handle a great amount of data at a moderate price. SkoleIT also was looking for higher performance than their previous infrastructure could provide.

Solution

StarWind Virtual SAN allowed the company to use conventional hardware and granted the performance they were looking for.

Problem

The company was looking for a solution capable of handling a great amount of data at a moderate price and without bringing unnecessary complexity and vendor lock-in to their storage ecosystem. SkoleIT intended to build an all-flash storage system that could be easily managed by a school within their budgets.

Solution

StarWind Virtual SAN allows SkoleIT to use standard components without any hardware vendor lock-in. The solution enables to reach higher performance, compared to traditional SAN systems. Apart from that, StarWind Virtual SAN ensures decent safety and stability for their customers. The solution allowed the company to keep track of their data and maintain their environment easily.

StarWind Virtual SAN makes it easier to host virtual machines.
