

### About the Company

**Zikol** is a North Macedonian construction company with 25+ years of experience that provides the entire scope of services in the field of construction and the real estate market.

### Company Profile

Construction

### Contact Person

Mladen Kiprijanov, IT Manager

### Problem

The organization required a shared storage solution to boost its workgroup environment and achieve scalability.

### Solution

Thanks to StarWind vSAN, the company ensures HA and gets options for scalability and flexibility.

# Zikol achieves 24/7 business operations by deploying a high availability (HA) cluster powered by StarWind Virtual SAN (vSAN)

## Problem

Before StarWind Virtual SAN (vSAN) deployment, **Zikol** had a Microsoft workgroup environment with Hyper-V on top. As the company grows, there were no options for scalability with such IT infrastructure. Besides, any failures in connection led to data loss that prompted the question of achieving high availability (HA) by adding a shared storage layer.

## Solution

Zikol has chosen **StarWind vSAN** because of the best price and technical support on the market. vSAN brought HA, stability, and flexibility to the company's IT infrastructure giving it the possibility to scale resources as needed. By building the IT infrastructure working like a dream, Zikol highly recommends **StarWind vSAN** to all specialists and companies looking for a shared storage solution.

StarWind vSAN works very stably. I'll recommend this solution and product to other IT specialists and beginners. The premium support feature is amazing. 24/7 The Best.

**Mladen Kiprijanov, IT Manager**
