Problem

The company needed a shared storage solution to obtain redundancy.

Solution

With **StarWind VSAN**, the company got redundancy without a need to buy additional SAN devices and at no extra costs.

Problem

Before **StarWind Virtual SAN (VSAN)** deployment, **Savronik Elektronik A.Ş.** had an IT infrastructure with physical SAN devices and Hyper-V on top. Dozens of storage devices took up a lot of space and required a lot of money to service them. To get the desired redundancy, the company needed to buy additional SAN devices. In turn, this entailed additional costs. **Savronik Elektronik A.Ş.** was desperate to find reasonably priced virtual shared storage that would reduce the number of hardware resources and provide redundancy. The company tested **StorMagic SvSAN** and **StarWind VSAN** and settled on a **StarWind** solution offering a better user experience.

Solution

With **StarWind VSAN**, **Savronik Elektronik A.Ş.** got redundancy over existing servers with no additional SAN devices. Purchases of additional equipment and correspondingly extra costs were not required. **StarWind** allowed the company to receive a solution that satisfied all its requirements at a reasonable price. With **StarWind VSAN**, **Savronik Elektronik A.Ş.** also obtained ease and convenience in managing the storage infrastructure. All storage-related operations are performed with **StarWind Management Console**, an easy-to-use software. Being satisfied with the work of the **StarWind** product, the company plans to use other **StarWind** solutions in the future projects.

StarWind is far ahead of its competitors with its large document archive and ease of use.
