

# telcomedia achieves data integrity and high availability with StarWind Virtual SAN (VSAN)

telcomedia

## About the Company

**telcomedia** is a Polish company providing IT services, including hosting in a data center.

## Company Profile

Managed IT Services  
Provider (MSP)

## Contact Person

CEO

## Problem

The company needed virtual shared storage to achieve HA and ensure data replication.

## Solution

With StarWind VSAN, the company got a shared storage solution implementing replication between servers and obtaining data integrity and HA at a very good price.

## Problem

Before StarWind Virtual SAN (VSAN) deployment, telcomedia had physical Dell servers with VMware ESXi on top. The main points of the company's concern were related to the lack of high availability (HA) and replication between servers. To resolve its problems, telcomedia needed a shared storage solution badly. However, normal SAN storage is very expensive so virtual storage grabbed the company's attention.

## Solution

**telcomedia** has chosen **StarWind VSAN** because of its reasonable price and highly proficient support. With minimal **StarWind VSAN** disaster recovery (DR) setup, the company has achieved the desired replication between servers. As a result, data integrity and HA were ensured. Thanks to StarWind, **telcomedia** easily solved all its problems and beefed up the IT infrastructure performance. Considering all the advantages of the StarWind product mentioned above, telcomedia highly recommends it to everyone, including its customers.

StarWind has a good price and very good support.
