Problem

TCSC wanted to keep their backups off-site. The solution they used for backups before could not provide that option.

Solution

StarWind Virtual SAN enabled to store backups off-site by presenting the storage via iSCSI.

Problem

The company was looking for a cost-effective solution for maintaining off-site backups. NetVault Backup which was used prior to StarWind Virtual SAN deployment could not provide that option.

Solution

StarWind Virtual SAN enabled the company to store backups off-site in a cost-efficient way.

Being both hardware-agnostic and capable of presenting the storage via iSCSI, the solution fitted the company's needs perfectly within a limited budget.

Apart from that, StarWind Virtual SAN streamlined utilization of the existing hardware. This allowed TCSC to squeeze maximum performance out of the existing infrastructure.

We picked StarWind because it was very cost effective and proved to do a great job of backing up our systems. It's been great at being able to back up our data to an offsite location.
